

The power distribution box tripped and there is no power

Overview

The problem is resolved by changing the breaker. Call a licensed electrician if you don't know how to do it yourself. If your breaker trips frequently or does not trip when it should, is hot to the touch, or cannot be reset, it must be replaced. Is your circuit not working or showing no power?

This article covers common causes and troubleshooting steps to quickly identify and resolve the issue. Readers will learn how to determine the problem and gain insight on essential tools for safe circuit repair. The content offers clear, practical. The most frequent reason for this lack of power is that the circuit breaker has tripped internally but the handle has not moved fully to the “off” position. Modern thermal-magnetic breakers are designed to move into a “half-tripped” or centered position, which can visually resemble the full “on”. If your circuit breaker is on, but no power is getting to your outlet, light, or appliance, there is a simple process to go through in order to find the culprit. Losing power can be disorienting.
